

3 COMPELLING REASONS TO USE OVERE FOR M365 CUSTOMERS

WHAT OVERE DOES THAT MICROSOFT CAN'T:

- Overe continuously scans for "SaaS attack paths" like inactive accounts with admin rights, hidden mailbox forwarding rules, and third-party apps with excessive permissions.
- Overe provides Automated Remediation. If it detects an anomaly like an "impossible travel" login paired with a mass file download.

OVERE REDUCES THAT 8-12 HOUR JOB TO UNDER 2 MINUTES

PROTECTION AGAINST "IDENTITY DRIFT" (THE INVISIBLE THREAT)

Microsoft tells you if the lock is installed; Overe tells you if the door was left propped open by an employee this morning.

RADICAL TIME SAVINGS: FROM HOURS TO SECONDS

Overe pays for itself in labor costs alone. It automates the work of a senior security engineer, ensuring you are 100% compliant and hardened in the time it takes to grab a coffee.

AUTOMATED "CLOUD DETECTION AND RESPONSE" (CDR)

A breach at 2:00 AM will sit active in your Microsoft tenant until your team logs in at 9:00 AM. Overe kills that attack at 2:01 AM without you ever lifting a finger.

Comparison of Real-World Value

Overe transforms high-effort, manual security tasks into automated processes, significantly reducing the time, technical expertise, and budget required to protect an organisation.

Metric	Native Microsoft 365	With Overe.io
Initial Hardening	8+ Hours (Manual)	< 2 Minutes (Automated)
Drift Detection	Manual Audit Required	Continuous & Proactive
Threat Response	Alert-only (Manual)	Auto-Response (Instant)
Expertise Required	Level 3 Engineer	Level 1 Tech / Admin
License Cost (2026)	Rising (up to 10-15% increase)	\$1.25/user (Fixed protection)
